

# Waste Data Framework – Workshop 4: Insights Report - Industry and Product Stewardship

WasteMINZ

21 September 2022

Duncan Wilson

# Introduction

- Framework update has 3 components
  1. New protocols for mandatory reporting
  2. New Standard Reporting Indicators for TA reporting
  3. Insights report for future development
- This workshop is looking at the third one
- Waste data gathering and reporting has focused on the needs of TAs and central government. However, private operators, the community sector, businesses, and product stewardship schemes will all benefit from being able to access good quality waste data.

# Introduction

- Some topics we could cover:
  1. How can diverted materials be tracked and calculated?
  2. How should reuse/refilling/refurbishment be tracked and calculated?
  3. How should waste and diverted materials from private and community sources be included?
  4. What access should private interests have to data that is reported?
  5. How should the NWDF be developed and governed going forward?

# Introduction

- Overall intent is to relate whatever waste data needs and issues we identify back to the Framework:
  - What role the Framework could play
  - What the priorities/timelines should be
  - How the Framework should be managed and governed to make sure all stakeholders needs are addressed

# Questions?

# Thank You
