

# Waste Data Framework – Workshop 3: Insights Report - TAs & Facility Operators

WasteMINZ

20 September 2022

Duncan Wilson

# Introduction

- Framework update has 3 components
  1. New protocols for mandatory reporting
  2. New Standard Reporting Indicators for TA reporting
  3. Insights report for future development
- This workshop is looking at the third one
- The current NWDF update does not cover all data reporting – there is a lot more that can and should be done to ensure good quality data is going to be available to everyone who needs it. This workshop focuses on issues around gathering data and will be most relevant to TAs and facility operators.

# Introduction

- Some topics we could cover:
  1. How should Geographic Source (i.e. the territorial authority area waste comes from) be accounted for?
  2. How can diverted materials be tracked and calculated?
  3. How should reuse be tracked and calculated?
  4. What access should TAs have to data that is reported?
  5. What access should private interests have to data that is reported?
  6. How should the NWDF be developed and governed going forward?

# Introduction

- Overall intent is to relate whatever waste data needs and issues we identify back to the Framework:
  - What role the Framework could play
  - What the priorities/timelines should be
  - How the Framework should be managed and governed to make sure all stakeholders needs are addressed

# Questions?

# Thank You
