

Welcome to
Cambridge...

STREET HARVEST

Each Street Harvest raised box includes a worm farm and micro food farm. Guardians feed the worms with food scraps and our local grower plants the food farm with edible produce for the neighbourhood to harvest. Street Harvest aims to reduce food waste, support food security, and connect neighbourhood communities. If you'd like Street Harvest on your street, get in touch through facebook or instagram @streetharvestnz

turning berms into food gardens

This is a micro-farm producing food and reducing food waste for the neighbourhood. It is tended by the adjacent household, they feed the in-ground worm farm and water when needed. Our grower replants the garden to keep it abundant.

A wooden raised garden bed is filled with a variety of plants. On the left, there are several heads of lettuce, some with reddish-purple leaves and others green. In the center, there are green leafy herbs and small purple flowers. On the right, there are large green leafy plants, possibly kale or collard greens. In the foreground, there are three black pots: one containing yellow lemons, one containing green leafy plants labeled 'SILVER BEET', and one containing green leafy plants labeled 'PAK CHOY'. A QR code is located in the bottom right corner of the image.
